

Intelligent InSites is now recruiting for:

Director of Product Development

Intelligent InSites is the developer of the InSites Enterprise Platform for the real-time location of patients, staff, equipment, and inventory within hospitals, clinics, and long-term care facilities. Our solution combines innovative location-sensing hardware, handheld PDAs and our hosted software applications that integrate with the customer's existing systems to deliver significant improvements in organizational efficiency, patient safety, and provider effectiveness. Intelligent InSites is based in Fargo, North Dakota with customers across the United States and Canada.

Director of Product Development:

Job Responsibilities

- Manage development and performance of a team of developers, testers and development specialists
- Document and validate market requirements for new product features
- Design and develop product and project development activities
- Ensure products support and adhere to all relevant technical, security, regulatory, and industry standards and requirements
- Participate in the design of platform architecture and development of core software components
- Optimize time and resources effectively, meeting development milestones and committed release dates
- Manage customer/partner expectations and provide release communications
- Implement quality assurance processes and ensure product releases meet quality standards
- Provide customizations and system integrations for specific customer implementations
- Organize and coordinate product and project development deliverables ensuring successful implementations.
- Provide business process consulting and identify product and service opportunities
- Develop and maintain product technical documentation
- Provide second tier technical support for partners and customers
- Provide technical training to integration and support staff and partners

The successful candidate will have the following skills:

- 5-7 years of IT/QA management experience
- 5-7 years of J2EE architecture experience
- 2-3 years of Java, EJB, JMS, JSP, Servlet, XML, database, and JavaScript development
- Basic design understanding of relational data modeling, logical data modeling, UML, OOA/OOD and SOA
- Familiar with Agile Software Development processes
- Proven experience with business process, strategic planning & project management
- Excellent written and verbal communication skills

Intelligent InSites offers our team members competitive compensation and benefits. Please email your resume and cover letter to careers@intelligentinsites.com.
